Co-founder and CTO building space domain awareness and satellite autonomy software. Primary author of ATLAS, now flying on a pilot mission; previously drove $1B+ in annualized revenue through personalization experiments at Amazon.

Experience

Co-founder and CTO, Stellerian – Seattle, WA June 2022 – Present

Defense-tech startup building space domain awareness and satellite autonomy; $800K pre-seed, $160MM in LOIs.

- Shipped ATLAS, our space domain awareness software, to orbit on a pilot mission with Satlyt: technical scoping lead, primary author, interface control document author, and integration point of contact.
- Technical lead on a $1.8MM, 24-month SpaceWERX D2P2 for deorbit as a service, delivering most of the work.
- Architected and built over 90% of the codebase across ATLAS, ARGUS, and ACECam, taking each from prototype to production; now hiring hardware and GNC engineers (Jan 2027) to take ownership.
- Led pose estimation for a Phase I AFRL STTR with one supporting engineer: built the datasets, trained and tuned the model, and ran it on Jetson (published at AIAA SciTech 2026), then cut inference latency ~40% with TensorRT.
- Built a distributed Blender service that renders any spacecraft model with realistic lighting and simulated sensors, producing 100K+ labeled images with keypoints, heatmaps, and masks.
- Leading technical scoping and acceptance for a follow-on mission with Blackwing.

Software Engineer II, Amazon – Seattle, WA May 2025 – September 2026

- Drove experiments across the “Keep Shopping For” feature family totaling $1B+ in annualized revenue.
- Delivered a cross-team launch that added a new behavioral signal to every “Keep Shopping For” feature, working around A/B-testing constraints to generate $225MM in annualized incremental revenue.
- Designed and guided an intern-led migration of the impression-based ranking processor to a new data source, cutting P99 latency from 35ms to 10ms.

Software Engineer I, Amazon – Seattle, WA February 2024 – April 2025

- Ran homepage recommendation experiments worth $400MM in annualized impact, making the feature #2 on Amazon’s mobile homepage by click-through rate and attributed revenue.
- Automated dataset compression with CDK, Lambda, and S3, cutting setup from 1 day to 1 hour and raising reliability from 90% to 99%.

Software Engineer (Consulting), Factory Wheel Warehouse – Remote January 2022 – February 2024

- Automated order importing, PO reconciliation, and tracking for 350+ monthly orders ($1MM+ annual revenue, 70% of company sales), cutting manual workload by 60%.
- Built ship-by-date alerts that reduced cancellations by 60% and late shipments by 80%.

Software Engineer Intern, Amazon – Seattle, WA Summer–Fall 2022, Summer 2023

- Built alarm-driven deployment aborts for Amazon’s company-wide CI/CD (200+ deployments per minute).
- Extended “Keep Shopping For” (12M+ daily users) to desktop with server-side device detection in Java/Spring.

Publications

Education

Western Governors University – B.S. in Computer Science July 2020 – December 2023

Skills

Languages: Python, Java, TypeScript, C++
Frameworks: NASA F´, React Native, FastAPI, Spring, Spark, Docker
ML/CV: PyTorch, ONNX, TensorRT, Blender
Cloud: AWS (CDK, Lambda, DynamoDB, EventBridge, S3, API Gateway, EMR)
